Data Source: Maine Hospital Inpatient and Outpatient Databases; Maine Health Data Organization.

Diabetes ED visits are defined as emergency department visits of Maine residents for which diabetes was the principal diagnosis, coded as 250.

Crude rates are ED visits per 100,000 population.

Age-adjusted rates are ED visits per 100,000 population age-adjusted to the U.S. 2000 standard population.

95% CI: 95% confidence interval of the rate.

NApp: Not applicable, age-adjusted rates are not calculated for age-specific groups.
